

Excel

All-in-One GS Course

GS Software Consulting.ca

Course Outline:

Versions 365 (or earlier)

Excel:

Excel is used to organize lists of information, perform calculations, analyze and visually graph data.

Objective:

- Start navigating an **Excel** grid of columns and rows and learn how to effectively set-up a worksheet. Understand cells and cell ranges, learn how basic math calculations are done, apply the most common formulas and use formatting tools like bold, italics and shading and find out how to sort and filter.

Prerequisite:

Basic Windows, keyboarding and mouse skills.
Access to Microsoft Excel software.

Duration:

3 hours (with a short break mid-way through)

Cost:

\$239.00 + HST (13%)

Topics:

- Start Excel
- Save and Name a Workbook
- The Worksheet View
- Navigate a Worksheet
- Modify a Worksheet
- Enter Text and Numbers
- Basic Math Calculations
- Most Used Functions
- Relative vs Absolute References
- Copy Formulas and Functions
- Format Appearance
- Page Review, Setup & Printing

Practice Lesson:

Rides-R-Us First Quarter Budget

First Quarter Budget
